This test checks that the unary NOT operator produces the correct truth table. Note that boolean values can not be cast to strings so this test first implicitly casts the resulting boolean values to integer values and prints these out instead.

## HAI

VISIBLE SUM OF 0 AN NOT FAIL MKAY? VISIBLE SUM OF 0 AN NOT WIN MKAY? VISIBLE SUM OF 0 AN NOT FAIL MKAY? VISIBLE SUM OF 0 AN NOT WIN MKAY?

## KTHXBAI

## Output:

1

0

1

0
