This test checks that the logical AND binary operator produces the correct truth table. Note that boolean values can not be cast to strings so this test first implicitly casts the resulting boolean values to integer values and prints these out instead.

```
HAI
        VISIBLE SUM OF 0 AN BOTH OF FAIL AN FAIL MKAY?
        VISIBLE SUM OF 0 AN BOTH OF FAIL AN WIN MKAY?
        VISIBLE SUM OF 0 AN BOTH OF WIN AN FAIL MKAY?
        VISIBLE SUM OF 0 AN BOTH OF WIN AN WIN MKAY?
KTHXBAI
```

Output:
0
0
0
1
